

ACMO COMPREHENSIVE PRESSURE MANAGEMENT

17th November 2016 | 12:50
BELEXPOCENTAR | St. Spanskih Boraca 74A | BELGRADE

In a context of growing attention to the optimisation of water networks, control valves play a key role to achieve savings in terms of water and energy. Unlike the shut-off valves, needle valves and automatic control valves meet the specific requirements of a continuous regulation.

With the combination of both types of valves, and an appropriate integration with automation, we obtain an optimal and balanced control throughout the network, intended to reduce the water losses and generate a comprehensive pressure management.

LOCATION

HOLIDAY INN HOTEL PRESENTATION HALL

12:50 - 13:30

M. Sc. Eng. Cristiano Sebastiani - Export Manager - ACMO S.p.A.

ACMO COMPREHENSIVE PRESSURE MANAGEMENT

TOPICS:

- Water losses – A global problem
- A practical approach for Water Loss Management
- Managing Leakage by Managing Pressure
- Control Valves for Pressure Management
- Needle valves
- Automatic Control Valves
- Benefits of Pressure Management

coffee at the stand nr. 5
